Cautionary Statements

Forward-Looking Statements

This presentation may contain certain "forward-looking" statements and information relating to IMPACT Silver Corp. ("IMPACT" or the "Company") that are based on the beliefs of IMPACT management, as well as assumptions made by and information currently available to IMPACT management. Such statements reflect the current risks, uncertainties and assumptions related to certain factors including but not limited to, exploration and development risks, expenditure and financing requirements, title matters, operating hazards, metal prices, political and economic factors, competitive factors, general economic conditions, relationships with vendors and strategic partners, governmental regulation and supervision, seasonality, technological change, industry practices, and one-time events. Should any one or more risks or uncertainties materialize or change, or should any underlying assumptions prove incorrect, actual results and forward-looking statements may vary materially from those described herein. IMPACT does not assume the obligation to update any forward-looking statement. The factors that could cause actual results to differ materially include, but are not limited to, the following: general economic conditions; changes in financial markets; the impact of exchange rates; political conditions and developments in countries in which the Company operates; changes in the supply, demand and pricing of the metal commodities which the Company mines or hopes to find and successfully mine; changes in regulatory requirements impacting the Company's operations; the ability to properly and efficiently staff the Company's operations; the sufficiency of current working capital and the estimated cost and availability of funding for the continued exploration and development of the Company's exploration properties. This list is not exhaustive and these and other factors should be considered carefully, and readers should not place undue reliance on the Company forward-looking statements.

Cautionary Statement

The Company's decision to place a mine into production, expand a mine, make other production related decisions or otherwise carry out mining and processing operations, is largely based on internal non-public Company data and reports based on exploration, development and mining work by the Company's geologists and engineers. The results of this work are evident in the discovery and building of multiple mines for the Company, and in the track record of mineral production and financial returns of the Company since 2006. Under NI43-101 the Company is required to disclose that it has not based its production decisions on NI43-101-compliant mineral resource or reserve estimates, preliminary economic assessments or feasibility studies, and historically such projects have increased uncertainty and risk of failure.

- 3. Plomosas mineral resources are reported by Consolidated Zinc Ltd. (CZL:ASX) on their website (ttps://www.consolidatedzinc.com.au) under the Australian JORC (2012) Code as mineral resources "depleted as at December 2021". IMPACT's Qualified Person has reviewed but not verified in detail these current reported mineral resources and is only reporting them as material recent mineral resources reported by CZL and available in the public record. IMPACT believes the estimates are relevant and reliable, given they are reported to Australian JORC standards; however, IMPACT's Qualified Person has not done sufficient work to classify them as current Canadian NI 43-101 mineral resources.

NI 43-101 Qualified Person

George Gorzynski, P. Eng., Vice President, Exploration and a Qualified Person under the meaning of Canadian National Instrument 43-101, approved the technical information in this presentation with the exception of the Capire project mineral resource estimate. Steven Ristorcelli, C.P.G. (U.S.A.), Principal Geologist for Mine Development Associates and a Qualified Person under the meaning of Canadian National Instrument 43-101, is responsible for the Capire mineral resource estimate and directly related information.

Highly Leveraged to Silver Prices

Silver vs IPT Share Price

- One of the best leveraged silver plays in rising silver market generating anywhere from 300% 1,300% return vs silver metal
 - In 2016, 2019, 2020, 2021's silver rally, IMPACT's share price generated significantly higher returns than holding silver bullion
 - Every \$1 increment in silver prices represents direct increases to profit and value of ounces in ground

Cheapest IPT shares has been since 2005

Each time, it's rallied

- One of the best leveraged PURE silver plays out there with 90% exposure to silver
- Several significant rallies last 20 years with price of silver expectation of a major rally coming again
- Silver 2025 outlook expected to outperform above \$63/oz in 2025 = adds to earnings for IPT

https://www.reuters.com/business/bofa-lifts-2026-gold-forecast-5000oz-sees-silver-65-2025-10-13/

Company Overview

TSX-V Listed producer with 2 operating mining projects in Mexico IMPACT SILVER C

Plomosas Mine

- New acquisition set to close by April 7, 2023
- Very high grade Zinc (-Lead-Silver) producer
- Exceptional exploration potential in district of big mines

Royal Mines of Zacualpan Silver Mine

- 17 years of Silver(-Lead-Zinc) production
- 2 production centres on large 211km² land package
- Strong exploration potential
 - Goal is to establish multiple profitable mining operations
 - 17 years of operating experience in Mexico
 - Using experience of strong operations team at Zacualpan, the plan is to realise the exceptional operations and exploration upside at Plomosas

Royal Mines of Zacualpan 500 Years of Production

Production summary so far

13.7 MILLION

silver produced since 2006

One of the purest silver producers with

93%

of revenues from silver in Q3 2025

Silver Production Since Acquiring the Project in 2006 (000 oz)

1450 to 1520

Indigenous peoples mined silver on the property and built temples in the current location of Zacualpan town.

1521

Cortes conquered
Mexico. The
Conquistadores
mined gold and
silver on the property
over the ensuing
centuries, leaving
many historical mine
workings.

1531

Spanish Crown granted 'Royal Mines' title to Zacualpan, the first mining district in the Americas so designated.

5,000+

Historical mine workings on the property (catalogued to date).

42

Historical mills (haciendas) catalogued to date, some centuries old.

Zacualpan located on large silver epithermal belt of Mexico. NW from Taxco district

Zacualpan and Plomosas Prolific History of Silver Mining

- One of the oldest mining districts in the Americas
 - Almost 500 years of recorded mining history
- IMPACT's exploration work has catalogued over 5,000 old mine workings on hundreds of veins and 42 historic processing plants, indicating extensive historical mining, large exploration potential and forming an invaluable database for modern and effective exploration

IMPACT's 2 processing plants in the Zacualpan District 1 in Chihuahua State (Acquired Q1 2023)

Guadalupe Processing Plant

- 535 TPD capacity
- Currently processing all mineral for IPT
- Running below capacity at 400TPD Q3

Capire Processing Plant

- 200TPD capacity (expandable)
- On care and maintenance since 2014
- Currently checking XRT process to lower cost

Plomosas Zinc-Silver Mine

- 80TPD (currently) capacity 150TPD
- Care/Maint since 2021 Restart Q3 2023
- One of the highest grading zinc mines 13%+

Some of the 42 historic processing plants in the

Royal Mines of Zacualpan Property Overview

- A 3.5-hour drive southwest from Mexico City
 - Paved road access
- Connected to a modern power grid with ample water supply and a skilled, 99% Mexican workforce

- 535 tpd capacity Guadalupe Plant processing mineral from four underground mines (Guadalupe, San Ramon, Cuchara, Alacran) and the Veta Negra open pit mine (all within close proximity)
- 200 tpd Capire Pilot Plant is on care and maintenance
 - Evaluating restart of operations

Zacualpan Operating Results

	2020	2021	2022	2023	2024	2025 Q3 YTD
Tonnes processed	140,069	145,458	145,458	147,444	136,280	104,622
Throughput (tonnes/day)	383	399	399	404	404	383
Average grade (g/t Ag)	172	159	159	159	160	157
Silver production (oz)	646,534	617,686	617,686	632,862	595,264	445,525
Lead production (tonnes)	240	250	250	227	215	164
Gold production (oz)	321	295	295	776	464	331
Silver sales (oz)	633,357	633,952	633,952	636,655	592,844	445,534
Lead sales (tonnes)	225	213	213	238	215	166
Gold sales (oz)	293	283	283	281	460	330
Revenue per tonne of ore processed (US\$)	\$116.47	\$119.04	\$105.39	\$136.62	\$168.80	\$224.48
Direct costs per tonne of ore processed (US\$)	\$80.82	\$86.44	\$97.44	\$130.58	\$143.80	\$152.91
Mine-level EBITDA (C\$M)	\$2.70	\$5.70	\$1.25	-\$0.60	\$0.90	\$4.38

- Cost efficiency controls in place to ensure margin and mine level EBITDA still generated.
- Focus is on grade and cashflow per ounce rather than maximizing ounces.
 Ability to ramp up when silver prices rise.
- 03 2025 highlights
 - Mine operating income for the third quarter 2025 was \$0.5 million, and \$3.7 million YTD, compared to \$0.1 million in Q3 2024 and a loss YTD of \$3.2 million in 2024
 - Revenue for YTD was \$31.2 million, representing a 44% increase compared to revenue

Production by Metal Value (Q3 2025)

Currently 5 mines feed the central Guadalupe Processing Plant

Mill Feed Mine Sources (Q3 2025)

Guadalupe

- Large historic producer located beside Guadalupe mill
- Epithermal silver-lead-zinc veins
- **53**% of Q3 2025
- production

Veta Negra

- Small open pit operation commenced production in September 2019
- Bulk tonnage silver-lead-zinc vein system
- 8% of Q3 2025 production

Noche Buena Carlos

Pecheco

 4km southwest of the Guadalupe mill. Last produced between 2010-2014 restarted as of August 2025.

Cuchara

- Production from medium grade epithermal silver-lead-zinc veins
- **15**% of Q2 2025 production

Alacran

Production restarted Q3 2024. 2% of feed this quarter

Significant Exploration Upside

- Exploration continues to evaluate the 5,000+ historic mine workings located on hundreds of mapped veins (red lines on map) on an extensive mineralizing system
- Area 1: Brownfields exploration for silver veins within close trucking distance to the Guadalupe plant; area includes the San Ramon, Cuchara, Alacran and Veta Negra mines
- Area 2: Early stage exploration for Zacualpan southeast extension silver veins (JV concession)
- Area 3: Brownfields and greenfields exploration on silver-rich VMS and vein targets; includes the open pit Capire mine
- Area 4: Brownfields and greenfields exploration on copper-gold and silver vein targets

Guadalupe to Alacran Exploration Area

- Fertile exploration area between two large historic Mines
- The Guadalupe Mine to the north produced over 10 million ounces silver between 1972-1991, and much more since first recorded production in 1529. Continues to produce for IMPACT.
- The Alacran Mine to the south is marked by extensive underground workings with historic reports of very highgrade silver and gold mining beginning before 1527. IMPACT started new mine production here in October 2022.

Including	292.80	293.70	0.90	611.0	0.17	0.60	1.34
MPZ-UG-007-24	207.00	207.75	0.75	519.0	0.54	0.20	0.39

Amount of drill core at Guadalupe warehouse

Area 1: Alacran Gold-Silver Mine 1918-1926 Mining Areas Long Section

- New IMPACT mining began in upper levels in October 2022 (Gold and Silver)
- Brownfield drilling planned for lower levels on 2 veins in 2023

Area 3 Capire: Potential Quick Expansion of Production

- 43-101 open pit resource of 4.5Moz Silver @ 79g/t¹ + lead-zinc in open pit with expansion / exploration upside
- 200 tpd pilot plant on care & maintenance; turnkey to restart with higher silver prices
- Infrastructure pre-built for 800 tpd plant
- VMS disseminated silver-lead-zinc (-gold-copper) deposit; other VMS prospects with upside nearby
- XRT sorting technology has potential to materially reduce operating costs and extend mine life
- 30k tonnes produced. Evaluating re-start of operations.

Capire open-pit 3D model

ZACUALPAN-CAPIRE SILVER PROPERTY

- Located 7 km west of the Guadalupe processing plant& southwest of Veta Negra Mine
- Sampling results from 2020 exploration include:
 - 97.5 g/t Au and 97.9 g/t Ag over a true width of 0.8 m
 - 18.25 g/t Au and 75.4 g/t Ag over a true width of 0.2 m
- Close to historic Chapanial mine which produced on three levels over 45 m depth and along strike for 100 m
- Vein is associated with a major structure which hosts a sulphide bearing polymictic breccia up to 8m in width
- Many other veins and anomalies are currently being explored

Plomosas Zinc-Lead-Silver Mine

New Acquisition announced February 2023

- Top quartile grade (13% zinc) for zinc mines globally² with byproduct lead and silver
- Over \$22 million invested by the previous operator; IMPACT acquisition price for \$6M
- Proximity to Infrastructure, services, and labor supply.
- Existing mine life and resource for 18 years of operations at 150tpd; expansion potential
- Plamosa production facilities are permitted and operating. IIMPACT's experienced team will change mining operations and upgrade the mill to improve efficiencies and methods.
- Plamosa is projected to be a short-term accretive acquisition with near term cashflow for IMPACT.
- Plomosas is a small mine located on a big exploration target situated in a belt of giant CRD deposits. The giant historic Santa Eulalia Mine located west of Plomosas, is the world's largest CRD deposit with historic production of over 450Moz silver from 51MT averaging 350 g/t silver, 8.2% lead and 7.8% zinc, and mined over 300 years.
- Some of the largest CRDS in area listed below

	Come of the largest of the in the meter solon								
Deposit Name Location		Estimated Silver (oz)	Notes						
Coeur d'Alene District	Idaho, USA	~250 million oz*	A classic CRD area with multiple mines and continuing exploration						
Comstock Lode	Nevada, USA	~200 million oz*	Historic silver deposit with CRD-style features (classification debated)						
Potosí (Cerro Rico)	Bolivia	~135 million oz*	Renowned high-grade deposit historically mined by CRD processes						
Fresnillo Mine	Zacatecas, Mexico	~400 million oz**	One of the world's largest silver resources; CRD classification is debated						
Santa Eulalia Mine	Chihuahua, Mexico	~450 million oz**	Significant CRD-type deposit contributing notably to regional silver output						
Cinco de Maya	Chihuahua, Mexico	~300 million oz**	Recently purchase from MAG Silver by Apollo Silver						

Plomosas is close to Chihuaha, Mexico and many large mines and prospects.

Q3 2024 Operation Fully Restarted

- Plomosas needs capitalization and a strong Mexican operations team to be successful; this is what IMPACT will bring to the project.
- In the recent past, costs rose due to inefficiencies of operation and under capitalization.
- Mill upgrade complete, pilot restart operation announced Q3 2023 on schedule

- · 80 TPD (currently) capacity 150TPD
- Production restarted Q3 2023
- · Concentrates being shipped on schedule

- - Zinc prices remain in range and higher
 \$2,900/tonne <u>Morgan</u>
 Stanley 2025 Dec.
 - Zinc going to slight oversupply <u>2026 then</u> back to demand

Significant Resource & Expansion Potential

IMPACT SILVER CORP

- 18 years of production at 150 tpd plant capacity in resources; significant scope for increasing throughput
- Exploration Upside: Open for expansion in all directions.
- 2Mt in tailings dam at 4% Zinc (88,000t Zinc)
- Top quartile grade for zinc mines globally at 13% zinc² plus lead and silver byproducts.

^{*} Plomosas mineral resources are reported by Consolidated Zinc Ltd. (CZL:ASX) on their website (ttps://www.consolidatedzinc.com.au) under the Australian JORC (2012) Code as mineral resources "depleted as at December 2021". IMPACT's Qualified Person has reviewed but not verified in detail these current reported mineral resources and is only reporting them as material recent mineral resources reported by CZL and available in the public record. IMPACT believes the estimates are relevant and reliable, given they are reported to Australian JORC standards; however, IMPACT's Qualified Person has not done sufficient work to classify them as current Canadian NI 43-101 mineral resources.

Geology & Mineralization

- Plomosas comprises a series of Carbonate Replacement Deposits (red and orange in figure)
- Mining on 2 carbonate (limestone) horizons (blue in figure)
- A 3rd carbonate horizon at depth remains unexplored
- Open for expansion in all directions

Schematic cross section of the Plomosas Mine mineralization

Exploration Upside (CRD)

- Exceptional exploration upside with only 600m of 6 kilometre structure explored
- Several drill ready targets
- Plomosas is a small mine located on a big exploration target situated in a belt of giant CRD deposits.

• Unexplored gold and copper targets with high grade grab samples and geophysics (IP, Mag) to the northwest associated with felsic intrusion

	Jose Olmedo Director	 40 years of mineral exploration experience w/ Equinox Gold, Glencore, Candelaria, Solaris Copper, and AMC Consultants Engineering geology from University National Autonoma de Mexico, Master Science from McGill.

Area 1: Alacran Gold-Silver Mine

Two historic reports indicate super high grades

Lewis (1920) "... At enriched places, lenses of silver sulphides are found, 30 to 70cm. wide, the ores carrying 20 to 60 kg. silver per metric tonne. The wallrock for a short distance is also impregnated to the point of making good mill-ore. The unenriched spaces between the ore bodies usually assay 400 to 500 gm. Silver. All the high-grade ores carry gold, with a characteristic accompaniment of iron and copper sulphides....."

Garcia (1921) reports "The Alacran Mine employed 500 workers who produced 8 to 10 tonnes <per day> of direct shipping ore assaying 35kg/tonne which was exported to Penoles in Toluca and 40 tonnes <per day> of less than 10kg/tonne which was sent to the <Cuchara> flotation plant.

Do the math: 50 tpd operation producing about 7 million ounces silver per year

Area 2Taxco North & Pregones Exploration Areas

- Joint Ventured with Pantera Silver Corp. (beyond trucking distance of IMPACT processing plants)
- Area is synonymous with silver in Mexico Taxco is the most famous silver mine in Mexico
- Taxco district still owned & explored by majors (Grupo Mexico.)

Panorama Taxco Forged in Silver

Silver Capital of the World

Many centuries of stories of work, sorrow, and love have given Taxco de Alarcón — named in honor of playwright and author Juan Ruiz de Alarcón, one of its most illustrious sons— the title of "silver capital of the world."

An expedition led by Spaniard Hernán Cortés in 1521 found deposits of the white metal close to this former Tlahuica settlement, leading to the founding of a nearby colony to work the "King's Pit," as the silver mine was known. By the end of the 16th century, Taxco was known far and wide; it supplied Europe with precious metals for many years. However, new deposits in Latin America pushed Taxco into obscurity for more than two hundred years, until José de la Borda rediscovered Taxco silver in 1716.

Silver-Zinc CRD Deposits

Some of the largest silver mines in world are Carbonite Replacement Deposits (CRD).

- A Carbonate replacement deposit is characterized by its polymetallic nature, indicating the presence of multiple metals such as copper, gold, silver, lead, manganese, and zinc within it. The composition of minerals within these deposits varies depending on their distance from the intrusive rock source.
- Typically, the mineralization process extends over a distance of up to 7-8 kilometers from the intrusion.
- Closest to the intrusion site, you find the copper-gold zone, followed by the lead-silver zone, and finally, the zinc-manganese zone.

Each Carbonate replacement deposit is categorized as an **epigenetic** deposit, meaning that it forms on or near the Earth's surface rather than within volcanoes.

- Many different deposits are created through a similar process known as replacement, leading to remarkably similar mineral compositions and crystal formations in these deposits. For example, a sample of a CRD deposit discovered in China would exhibit a mineral mixture very similar to one found in Mexico.

CRD is ~4 billion ounces or 40% of the 10 billion ounces silver produced in Mexico.

Cinco de Mayo: Mag Silver

♦\$2 Billion Market Cap

Taylor Deposit: Arizona Mining

South 32 bought for \$1.8 Billion

Resolution Copper: RC Consortium

Estimated to produce 40 Boz Lbs of Cu over 40 years

<u>Peñasquito</u>: Newmont Goldcorp

Fifth largest silver mine in the world (17.8 Moz Au + 1,070 Moz Silver (1 billion ounces)

Zinc Fundamentals

Zinc shortage coming 2026.

- Underinvestment in global exploration
- Declining production from existing mines
- Incremental production coming at higher cost and lower grades
- 60% of total demand tied to protection of steel; decarbonization is steel intensive; Continued demand growth with reduced stocks drive positive price response

Every 1MW of installed wind turbine capacity requires

7 tonnes zinc.

Zinc prices at 7 years highs, yet equities for zinc has largely not reflect this – we believe company valuations are low but will catch up and IPT will be producing more zinc to capitalize on this.

Zinc Peers Comparables

- One of the highest grade zinc mines amongst peers
- Valued at over \$440 US/tonne ore

Zinc Peers Infrastructures

 Difficult to secure high grade zinc/silver miners globally with infrastructure, low cost, staffing, and permitted. Those that are usually are bought out.

Company	Jurisdiction	State Road	Power Lines	Work Force Locally	Permit
IMPACT Silver	Chihuahua, Mexico	/		/	/
Fireweed Zinc	Yukon, Canada	~		/	
Solitario Zinc	Alaska / Peru

Ongoing Cost Reduction through technology - XRT

- Preliminary test from Haylard Engineering for premining treatment was positive - 20-30% reduction in cost per ounces
- well-known that the crushing and grinding of ore consumes around 60 per cent of a mine's operating and energy costs in addition to creating most of the greenhouse gas emissions

Kai Bartram,

efficiently remove excessive waste and sub-marginal grade material from pre-mined, lowgrade stockpiles, producing a coarse (typically >10mm) upgraded plant feed. A supplementary high-margin ore feed can be generated from such stockpiles with minimal

Steinert has overseen the bulk ore sorting test work undertaken on material from low-grad open-pit stockpiles at Volcan Compañía Minera's base metals operations in Peru and

Carbonite Replacement Deposits

 Refurbishing old assets and equipment – in this case the mine shaft and underground railroad to lower cost and speed up tonnage being hauled out of mine

ESG in Operations

- IMPACT prioritizes ESG as it directly impacts community in which we live and work.
 - Clear goals and active targets on all fronts.
 - Integral part to IMPACT operations.

Environmental Social Governance (ESG)

In 2021 with the clear signs of global warming and environmental changes—the investor community is increasingly focused on supporting companies that in turn give back and care for the communities they work in.

At IMPACT Silver, Environmental, Social, and Governance (ESG) isrt' just about metrics-but about a way of operation.

Environmental (E)

- Systematic reclamation work on previous minded areas.
 Total 6,000 trees reforest program
- Planting 2,200 agave plants by 2022
- Pilot solar panel project to generate off-grid green energy for mine office
- Studies to expand solar power gereration on site

Social (S)

- Improving lives of the farming community by assisting in cash crops
- Building schools, community centers, and local community services
- New medical clinic in community built
- New water services infrastructure in local town
- Positive relationship with Union, and suppliers and contractors
- Zero work stoppage
- Active engagement with local community reps to faciliate 2-way dialogue

Governance (G)

- Four independent board members with combined 100+ years in mining
- Independent audit committee quarterly meetings
- Trading Policy, Community Relations Policy and Conduct and Discipline Policy

XRT Discussions

- Preliminary test from Haylard Engineering for pre-mining treatment was positive –
 20-30% reduction in cost per ounces
- Crushing and grinding of rock consumes around 60 per cent of a mine's operating and energy costs in addition to creating most of the greenhouse gas emissions
- X-ray transmission may be a good solution if your rock has differences in density, which usually translate to atomic density differences. X-ray transmission measures how many x-rays come through a particle because when different minerals are xrayed, a difference in the attenuation of the mineral is found.

Kai Bartram, Tony Parry & Luis Loaiza Sensor-based, automatic ore sorting technologies can be used in the mineral industries to efficiently remove excessive waste and sub-marginal grade material from pre-mined, low-grade stockpiles, producing a coarse (typically >10mm) upgraded plant feed. A supplementary high-margin ore feed can be generated from such stockpiles with minimal capital investment and no requirement for increased mining activity, thereby contributing tincreased economic returns to the operations.

Steinert has overseen the bulk ore sorting test work undertaken on material from low-grad open-pit stockpiles at Volcan Compaňia Minera's base metals operations in Peru and

Metal Zoning Trend

- District is tilted exposing deeper copper-gold zone in centre of property and shallower silver mineralization to northeast
- Intrusive rhyolite cupolas and dykes indicate heat source in centre drove mineralizing systems
